NORTHERN IRELAND BREAST SCREENING PROGRAMME QUARTERLY REPORT ON ROUND LENGTH

INTRODUCTION

The NHS Breast Screening Programme Publication No. 40 includes round length as an outcome measure as follows:

Objective:To ensure that women are recalled for screening at appropriate intervals

Criteria:The percentage of eligible women whose first offered appointment is within 36 months of their previous screen

Minimum Standard:> 90%

Target:100%

Method of Data Collection:

Round length data were derived using a method developed by the West Midlands NHSBSP. The NBSS report measures the weeks between previous screen and date of first offered appointment.

Round Length data are presented as follows:

For Northern Ireland

- Round length data and graph for the current quarter.

Each Screening Service

- Round length data and graph for a previous period and current quarter.
- Detailed round length data as average values broken down according to the months between previous screen and date of first offered appointment for the most recent quarter.
- A cumulative percentage graph showing the percentage of women re-screened according to the time between previous screen and date of first offered appointment, based on average values for the most recent quarter.

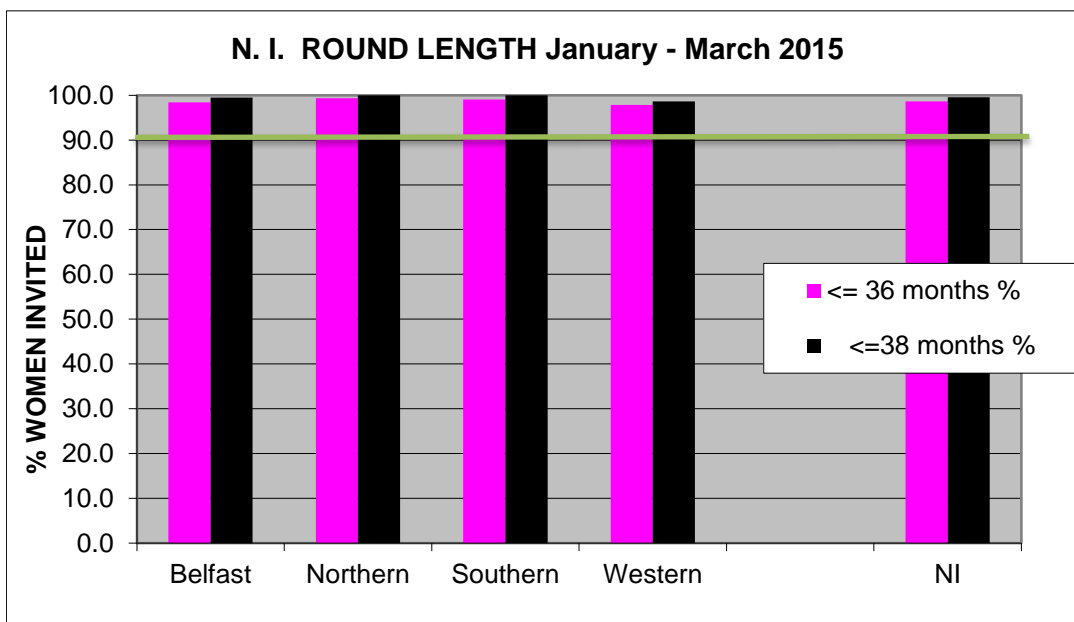

NB: A traffic light colour coding system is used, whereby breast screening units meeting the 90% standard are highlighted in green, those not meeting it are in red.

Units that do not achieve the minimum standard within 10% are asked to provide a brief explanation as to why the standard was not achieved, and action required. These reasons are listed in the exception reports at the end of this booklet.

Exception Report
Round Length
1 January 2015 - 31 March 2015

Screening services that did not achieve the minimum standard gave the following reasons.

Unit	Reason	Trust Action Plan and Timeframe for Meeting the Standard
Eastern		Standard achieved
Northern		Standard achieved
Southern		Standard achieved
Western		Standard achieved
